Aston Face lift Instruments Set

Model / SKU:SS-3006
Category: Surgical Instrument set / Plastic Surgery Set
Product Page: https://hamsansurgical.com/product/aston-facelift-instruments-set/

Product Overview

The Aston Face lift Instruments Set is a 62 piece rhytidectomy set built around Aston SuperCut curved scissors, supplied in two lengths. Across 28 instrument types it covers subcutaneous flap undermining, SMAS plication, platysma dissection, hemostasis, tissue control, retraction and wound closure.

The set is CE-compliant, made from stainless steel, reusable and autoclavable, with TC-tip needle holders and Crow coagulating forceps. A stainless steel sterilizing box is included, so the full set can be reprocessed and stored as one unit. It ships worldwide from hamsansurgical.com.

PERFORMANCE IN CLINICAL PRACTICE

Standard rhytidectomy technique elevates the flap in the subcutaneous plane with spreading maneuvers. The SuperCut micro-serrated edge maintains tissue engagement through each cutting stroke, consistent with that technique. Established reprocessing guidance calls for autoclaving instruments open and avoiding benzyl ammonium chloride solutions on tungsten carbide inserts. The included sterilizing box keeps the set together through each cycle.

Technical Specifications

Specification	Details
Product Name	Aston Face lift Instruments Set
Model / SKU	SS-3006
Product Type	Specialty Plastic Surgery Set
Instrument Count	62 instruments, 28 instrument types
Primary Scissors	Aston SuperCut Scissors, curved, 6-3/4 in and 8 in
Supporting Scissors	Baby Metz SuperCut, Mayo, Iris SuperCut, Stevens SuperCut
Edge Technology	SuperCut on all scissors, TC-tip on needle holders and Crow Coagulating Forceps
Material	Stainless Steel
Reusable / Single-use	Reusable
Sterilisation Method	Autoclavable

Clinical Applications

Suitable For:

·**Rhytidectomy (face lift):** Aston SuperCut scissors undermine the subcutaneous skin flap.
·**Deep-plane face lift:** Horton-Adson TC forceps and Adson Brown forceps hold flap tissue during dissection.
·**SMAS plication:** PAR TC needle holders support suturing during plication and closure.
·**Platysma dissection:** Baby Metz and Stevens SuperCut scissors provide fine, controlled dissection.
·**Combined face lift and rhinoplasty:** the nasal tip retractor and Senn retractors provide exposure.

Key Features

- **Aston SuperCut scissors:** curved, double-edged serrated blades in two lengths for subcutaneous flap undermining.
- **SuperCut edge:** applied across the scissors in the set, from Aston to Baby Metz, Iris and Stevens patterns.
- **TC needle holders:** four PAR TC needle holders for wound closure.
- **Coagulating forceps:** three Crow Coagulating TC forceps for controlled hemostasis.
- **Hemostats:** Halstead curved, Crile curved and Kocher artery forceps in multiple quantities.
- **Tissue control and retraction:** Adson forceps, Pitanguy flap grasping forceps, Allis forceps, Senn retractors and Gillies skin hooks.
- **Set completeness:** scalpel handles #3 and #4, a 6 in stainless steel ruler and towel forceps are included.
- **Sterilizing box:** a stainless steel sterilizing box is included for reprocessing and storage.

Usage and Care Guidelines

1. Inspect each instrument before use for visible damage, joint function and tip integrity.
2. Clean immediately after use by rinsing under running water to remove biological material.
3. Decontaminate using a validated washer-disinfector or manual cleaning protocol.
4. Sterilise by steam autoclave with ratchets open, per facility protocol.
5. Lubricate hinged joints with instrument-grade lubricant after each cycle and avoid benzyl ammonium chloride solutions on TC-tip instruments.
6. Store in the stainless steel sterilizing box or a clean, dry, covered tray, and do not use any instrument showing corrosion or deformation.

Frequently Asked Questions

What instruments are included in the Aston Face lift Instruments Set?
The set contains 62 instruments across 28 types, including Aston SuperCut scissors, PAR TC needle holders, Halstead and Crile hemostats, Senn retractors and a sterilizing box.

Is the Aston Face lift Instruments Set autoclave-compatible?
Yes, the set is reusable and autoclavable.

What procedures is the Aston Face lift Instruments Set used for?
It is used for rhytidectomy, deep-plane face lift, SMAS plication, platysma dissection and combined face lift and rhinoplasty.

Does HAMSAN SURGICAL ship the Aston Face lift Instruments Set internationally?
Yes, HAMSAN SURGICAL ships globally from its manufacturing base.
